PROFESSIONAL SUMMARY

Full-Stack Developer specializing in the MERN stack (MongoDB, Express, React, Node.js) with a focus on building scalable web applications and efficient backend systems. Advanced practitioner in Python-based Data Structures and Algorithms (DSA), dedicated to clean code and performance optimization. Hands-on experience developing end-to-end web applications, including AI Chat Web Applications and full-stack Task management systems. Committed to high-performance delivery and continuous technical growth within the IT ecosystem.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML5, CSS, SQL, Java, PHP
Backend: Nodejs, Express, RESTful APIs
Frontend: React.js, Redux, Bootstrap, Tailwind CSS
Database: MySQL, MongoDB
Core CS: Data Structures & Algorithms, OOP, REST Architecture
Tools & Version Control: Git, GitHub, Postman, VS Code

PROJECTS

AiChatApp - Real-Time Chat Application | GitHub

Preview

React.js, Node.js, Express.js, MongoDB, Gemini API, Razorpay

Intelligent real-time chat platform leveraging AI for context-aware responses and secure payment processing.

- Engineered a high-performance full-stack interface using React.js and Tailwind CSS, achieving a 100% responsive UI and significantly reducing message latency through optimized state management.
- Integrated Gemini API and ImageKit to enable context-aware AI text responses and dynamic image generation through custom prompt engineering.
- Implemented Razorpay API to handle secure end-to-end payments and subscription-based access to premium AI features.
- Developed a scalable backend using Node.js and Express.js, featuring robust API endpoints for seamless integration between the AI models and the MongoDB persistent storage layer.

SkyCast – Real-Time Weather Intelligence Dashboard | GitHub

Preview

React.js, OpenWeather API, TailwindCSS, JavaScript

Dynamic weather platform providing real-time atmospheric data and multi-day forecasts, delivering hyper-local weather insights with high accuracy

- Engineered a responsive weather dashboard using React.js, integrating OpenWeather API to fetch and display live temperature, humidity, and wind speed data.
- Developed a seamless global search functionality with optimized API handling and dynamic UI rendering, ensuring hyper-local weather insights are fetched and displayed with sub-second latency across all devices.

TaskFlow – Full-Stack Task Orchestration System | GitHub

Preview

MongoDB, Express.js, React.js, Node.js, JWT, Render, Vercel

Full-stack productivity platform that enables users to manage complex workflows with real-time updates, secure authentication, and persistent data storage.

- Engineered a robust task management platform using the MERN stack, featuring secure JWT-based authentication and personalized user dashboards to streamline daily productivity.
- Architected a scalable backend with optimized RESTful APIs and MongoDB schemas, implementing efficient CRUD operations and a monorepo structure for seamless deployment and sub-second data synchronization.

ACHIEVEMENTS & EXTRACURRICULAR

- Tech Community Engagement (LinkedIn): Actively documenting a strong problem-solving journey focused on Data Structures & Algorithms (DSA). Regularly solving LeetCode challenges and publishing technical posts to explain core logic and coding concepts.
- Building in Public (MERN Stack): Showcasing practical development skills by sharing real-world project updates. Regularly posting about backend architecture, API integrations, and full-stack applications built using MongoDB, Express.js, React, and Node.js.

EDUCATION

Bachelor of Commerce in Computer Applications (BCCA) *2024 - 2027*

G. H. Raisoni College of Engineering and Management, Nagpur

Current CGPA: 7.89/10 (Till 3rd Semester)
